

Associate in Science: Chemistry Pathway

All Pathways are designed to transfer to a four-year institution for eventual completion of a BA/BS degree.

Chemistry is the study of the materials that make up the world around us – how they behave, what they're made of, and what properties they have. Chemistry relies on experimental observations and the development of theories to explain the observations. Students studying chemistry develop skills to analyze data, develop models and theories based on data, and communicate complex ideas. A major in chemistry can prepare students for a career in areas such as engineering, medicine, research, business or education.
